

PIC359

The Leader in Robust Lean Growth

PIC

NEVER STOP IMPROVING

The PIC359 is designed for producers looking for robust lean growth with excellent percent lean. This cross-bred boar performs well in challenging environments with the continued high growth rates and feed conversion you expect from PIC sires. This all-around boar is an excellent choice for producers looking for a more robust sire.

Commitment to Improvement

PIC strives to deliver a continually improving line of boar products and services. PIC products combine a global genetic base with modern selection tools and intensive animal selection to deliver a faster rate of genetic improvement to producers. This high health system has less genetic lag and allows genetic ranking of boars to occur across herds rather than within herds. A thirteen-week performance test prior to being made available for sale ensures boars with the highest production efficiency.
