

# PIC380

## The Ultimate Combination

PIC

NEVER STOP IMPROVING

### Bred For Maximum System Throughput... and Profits

PIC380 provides the high standard of carcass and meat quality for which PIC progeny are known. With selection based on PIC's new Crossbred Breeding Values, PIC380 progeny exhibit excellent daily gain and feed conversion rates, all the way to high slaughter weights.

PIC380 is the combination of the outstanding carcass and meat quality characteristics found in both the PIC280 and PIC337. PIC380 progeny demonstrate excellent primal yields and optimal lean percentages. Fast growth and low feed conversion inherited from those lines also bring you the low cost of gain you have come to expect from the PIC sires. In addition, PIC380's progeny exhibit strong birth to market survivability, even to heavy market weights.

PRODUCTION TRAITS		CARCASS PERFORMANCE	
10,700 pigs.* No Paylean® was fed.		Adjusted to 203.5 pounds	
		Pigs were harvested at multiple plants.	
Average daily gain, lb./d	1.71	Backfat, in	.74
Average daily feed intake, lb./d	4.22	Carcass yield, %	76.53
Feed conversion	2.47	Lean, %	54.24
Mortality rate, %	2.78		
Culls, %	2.23		
Full-value pigs marketed, %	94.99
